Finishes – **Polished**

Best suited for

- **Countertops**
- **Interior Wall**
- **Interior Floor**
- **Fountains**
- **Pools**

Most preferred

- **North America**

Quartzite is one of the most physically durable and chemically resistant rocks found at Earth's surface. Like other natural stones, quartzite is also a mined stone and is considered high-end and luxurious. When properly prepped, quartzite resists moisture, bacteria, stains, scratches, and is also heat-resistant. When heated during the process of manufacturing, individual quartz pieces recrystallize giving it a beautiful and decorative sparkling pattern.

Taj Mahal Quartzite has a mild white background with light brown and golden veins which give it an extraordinary thunder effect. This stone takes its name from India's great monument Taj Mahal, because of its colour and beauty. Taj Mahal Quartzite is an ideal material for countertops or high traffic areas because of its durability, easy maintenance and beautiful appearance.

Use it for Bathroom Vanities, Exterior Cladding, Exterior Pavers, Interior Flooring, Interior Walls, countertops and other design projects.
